EXPERIENCE

- Capgemini** Hybrid
Software Engineer -> Sr. Software Engineer -> Associate Consultant (Full-time) July 2023 - Present
 - Recovered a production-critical SSL outage in <24 hours:** as sole platform owner, coordinated with the GroupIT team to obtain a CA-signed certificate for the enterprise-hosted domain, reinforced reverse proxy with nginx; enabling successful delivery of a key demo the following day.
 - Implemented custom internal service with Azure Deployment Environments:** using *Bicep* and custom *Terraform* container images. Designed least-privilege access with *Azure RBAC*, identities, and *PIM*. Collaborated with Microsoft consultants, delivered leadership demos, improving developer environment provisioning efficiency by **33%**.
 - Architected and executed deployment in a privatized VNet aligning with GIT policies:** including redesigned network topology (VNet peering, CIDR planning, NSGs, Private Endpoints) reducing costs by upto **20%**, hardened APIM & App Services—eliminating public surface exposure and aligning deployments with GroupIT compliance standards.
 - Led migration strategy of Java 11 Spring Boot micro-services to Java 17:** while contributing to implementation of structured logging and updates to GitHub Actions to reduce build times by **30%** across environments
 - Assumed end-to-end DevOps ownership after leadership exit:** managing deployments, sprint commitments, and enterprise client demos (including *Bayer*, *UGII*, *GreenStruxure*) independently; *successfully delivered 2 production migrations* while maintaining delivery velocity under resource constraints.
 - Engineered hybrid DevOps ecosystem (Azure + AWS):** deployed on-prem *JIRA* via *AWS EC2* with *HAProxy* routing, and standardized *Developer Workspace* automation for *Java* baseline, *Docker*, *WSL security validation*, *Git branching strategies*, significantly improving onboarding consistency across internal and external project teams.

PROJECTS

- KubaForm:** A *Terraform*-based *Kubernetes* provisioning framework that automates *EC2*-backed cluster setup (*kubeadm*, multi-node, HA) with *S3* state backend, TLS, and DNS support. Enables rapid spin-up/tear-down of cost-efficient clusters (**>27% cheaper than EKS**), simplifying DevOps workflows and infrastructure experimentation.
- Krawler:** a serverless URL shortener using *AWS SAM*, *Lambda*, *API Gateway*, and *DynamoDB* (single-table design) with *React/Tailwind UI*. Implemented secure, scalable APIs (CRUD, redirects, analytics, TTL expiry, password protection) with unit/E2E testing and automated deployment workflows.
- GoodmanROK:** A *Go*-based CLI/TUI tool for generating context-aware email drafts using *xAI models*, enabling developers to draft emails without leaving the terminal. Implemented configurable *tone/language*, *multiple model options*, and *scriptable workflows*, with a focus on speed, usability, and privacy-first API integration.
- Apollum:** Hospital Management System built with **DDD** architecture & **40+** APIs supporting clinical & administrative workflows. Implemented using *Spring Data* & *Spring Security*, plus analytics-driven dashboards via *JPA repository pattern*.

COMMUNITY CONTRIBUTIONS

- Paper: Uncovering Red-Black Deployment: Release Engineering in Netflix's DevOps Ecosystem:** (WIP) A case study uncovering the practices and strategies behind Netflix's deployment strategy. (ETA: May '26)
- Technical Blog:** Publish technical blogs on DevOps systems, infrastructure design, and project learnings.

CREDENTIALS AND ACCOMPLISHMENTS

- Major Credentials:** AWS Certified Developer Associate (DVA-C02), AWS Certified Cloud Practitioner (CLF-C02), Microsoft Certified Azure Fundamentals (AZ900)
- MicroCredentials:** AWS Serverless Demonstrated, AWS Application Networking Demonstrated
- Google Swags (2022):** Secured in **TOP 1%** in Google Qwiklabs challenge and received swags from GCP team.
- LPU Web Hackathon (2022):** 1 week long full-stack web hackathon; Secured **Rank 1** and received ₹ 10,000 cash prize.

SKILLS SUMMARY

- Languages & Frameworks:** Go, Java, Spring, Python, PowerShell, C#, LaTeX
- Observability & Monitoring:** ELK, Grafana, Prometheus, Cloudwatch, X-Ray
- Serverless & Cloud:** SAM, API Gateway, Lambda, DynamoDB, Fargate, IAM
- Provisioning & Management:** Kubernetes, Terraform, CloudFormation, Bicep, Ansible, Nix
- CI/CD Platforms:** GitHub Actions, Azure DevOps, CodePipeline
- Other Tools:** Linux, Git, Docker, Nginx, Jira APIs, HAproxy, WSL

EDUCATION

- Lovely Professional University** Punjab, India
Bachelor of Technology - Computer Science & Engineering; GPA: 7.6 August 2019 - July 2023
Courses: Operating Systems, Data Structures, Networking, Web Development, Cloud & Virtualization, Databases, Information Security
